

Practice 5.1

- a. For each employee print last name, salary, and job title.
- b. For each department, print department name and country name it is situated in.
- c. For each country, finds total number of departments situated in the country.
- d. For each employee, finds the number of job switches of the employee.
- e. For each department and job types, find the total number of employees working. Print department names, job titles, and total employees working.

A brief Introduction to Oracle SQL/PL-SQL

- f. For each employee, finds the total number of employees those were hired before him/her. Print employee last name and total employees.
- g. For each employee, finds the total number of employees those were hired before him/her and those were hired after him/her. Print employee last name, total employees hired before him, and total employees hired after him.
- h. Find the employees having salaries greater than at least three other employees
- i. For each employee, find his rank, i.e., position with respect to salary. The highest salaried employee should get rank 1 and lowest salaried employee should get the last rank. Employees with same salary should get same rank value. Print employee last names and his/he rank.
- j. Finds the names of employees and their salaries for the top three highest salaried employees. The number of employees in your output should be more than three if there are employees with same salary.

a

```
1 SELECT E.LAST_NAME,E.SALARY,J.JOB_TITLE
2 FROM EMPLOYEES E JOIN JOBS J
3 ON (E.JOB_ID = J.JOB_ID);
```

Message Summary Result 1

LAST_NAME	SALARY	JOB_TITLE
Gietz	8300	Public Accountant
Higgins	12008	Accounting Manager
